

Folding the Wrapper

- 1 Begin by cutting out the wrapper using the outer cut lines

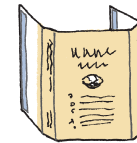

- 3 Affix a strip of dry adhesive along this edge (shown in blue) *

Place a 2nd adhesive strip on the **BACK SIDE** of the wrapper, again along the edge

- 2 With a fine-tipped bone folder crease the paper along these 4 lines, then fold the paper sections making sure the top and bottom edges are lined up.

- 4 The folded paper will look like this:

An Important Tip:

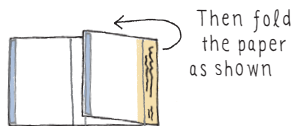

Fold all creases in both directions. Your wrapper construction will be much easier this way.

Use the bone folder to press the paper into crisp folds.

Helpful Tools

- ~ A snap-off graphic knife (Olfa is a good brand)
- ~ A bone folder with a fine tip to crease the paper
- ~ A cork-backed ruler to guide the knife
- ~ A self-healing cutting mat

- 5 To fold the strip of paper into a box, begin by placing it face down

When folding the paper make sure the top and bottom edges are lined up

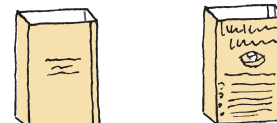

- 6 One last fold completes the wrapper

The adhesive is on the **BACK SIDE**

- 7 The finished wrapper will look like this:

The back ... and here the front

This gap is purposeful

- * Grafix Double Tack Mounting Film works well for me. Other "dry" adhesives, such as double stick tape, should work as well. It is best to test this out.
